The comment by one of the reviewers is correct and authors should modify the statement. The authors wrote (line 200) that "... to date no previous studies have assessed the whole-genome methylation status in SMA patients in comparison with healthy individuals". This statement is wrong. Please be informed that whole-genome methylation analysis was performed by Zheleznyakova et al. // Eur J Hum Genet, 2013.

Authors should not claim a false statement and incorporate this reference.

Other than this issue, the manuscript may be acceptable.
