Reviewer’s Comment:

It is very important to mention that the authors have errors of introduction in the manuscript, about what I mentioned before it is very important to include the map of the collection of sample and mention in the manuscript the parameters of AAS (model, lamp or LOD).

Author’s feedback:

Authors want to say that the map of the area is not available
The heavy metals quantified have been listed and corrected in replicates. Samples were sent out for analysis using AAS in a special research laboratory by authors and results only provided to us at the end so, we fear we may not be able to provide all that the reviewer is asking for.
