|                              | It’s meaningful to investigate effect of feed intake, mortality rate, culling rate, labour and floor space on egg production, but the draft should be rewritten for there are many extra and repeated sentences. Specifically,  
  1. The abstract should be written, more scientific words should be used instead of oral.  
  2. More details should be described in the section of methods, such as how the eggs were collected, what the size is etc. Conclusion should be based on data but not prediction. |                                                                                                                                 |

**Minor REVISION comments**

**Optional/General comments**
