

Editor's comments:

The manuscript authors needs to do some corrections. Like-

- a. authors are suggested **to change Melodogyne Nematofauna to** Root-knot nematodes or *Meloidogyne* spp from the title.
- b. Authors need to remove the lines 15-18(There was.....incognita) and ultimate findings may come here from conclusion (suggestion: In all stages of sampling, *Hibiscus esculentus* proved to be more susceptible to infestation, followed by *Amarantus* spp while the least infested was *Hibiscus sabdariffa* and *M. javanica* appeared to be more abundant than *M. incognita* in the study area)
- c. Reference writing style must be followed properly.

Rest of the things are done according to the reviewers query except reference writing style.

Author's feedback :

- (a) Agreed. It has been replaced with Root-knot nematodes.....
- (b) Good suggestion. Accepted sir.
- (c) Corrected.
