**Editor's comments:**

I would require that the authors include a reference to the unpublished master thesis of one of them (Bayowa, College of, University of South Africa) from which more than 36% is literally quoted. I would also require that the South African university confirm that they accept this publication.

I feel this can be clarified.

In addition – and this requires revisions: I would say the authors to reformulate any literal copies of text which were found when using an internet tool. I have attached the relevant output of an originality check. There are some paragraphs (also available on the internet) which are not original, and on a further check refer to the same sources as in the earlier text. This should be changed. One paragraph is part of the PAH item of Wikipedia.

**Author's feedback:**

The unpublished master thesis of Bayowa, A.V has been included. (Reference Number 39).

We have written to the University of South Africa, Pretoria. They have asked for evidence of peer-review of the manuscript which we have forwarded to them. We are awaiting their acceptance of the publication.

The texts have been reformulated by using the Turnitin Report as a guide. Thanks.
