### Compulsory REVISION comments

I do not recommend acceptance of this manuscript in its current version. Reasons:

1) About the sample: did any of the children assessed have any previous psychiatric condition (GAD, MD, OCD, ODD)? It is important to stress that 50% of children with the ADHD have a second psychiatric disorder. In these situations, it can be difficult to determine which symptom is caused by which disorder. For instance, in a child who has both ADHD and ODD it can sometimes be difficult to tell whether the impulsivity of the child is experiencing is due to ADHD or ODD.

2) The description of the diagnostic assessment need to be better explained.

3) In the methods and results, the authors should be more focused.

4) The discussion should be more directed to address on how the present paper further contributes to the current “state of the art”.

5) The reference list should be revised.

In summary, I have methodological questions that need to be answered in order to judge the quality of this research. Overall I suggest an extensive review of the English language.

### Minor REVISION comments

P2. Is the right hemisphere a subdominant hemisphere? This concept is incorrect. Criterion or criteria? Consider revise

P1. 14 pre-scholars? Do you mean fourteen pre-scholars?
