

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>Since results are correlations and this is a preliminary study, it has to be clearly explained that Serum Prolidase activity might have an effect on MDD, that is not cause-effect or action-reaction.</p>	<p>Thanks for your suggestion. As per your suggestion I have added "might be" throughout the manuscript, whatever applicable.</p>
<p>There are still a lot of details explaining the laboratory procedures.</p>	<p>As per your suggestion I have made the changes.</p>
