Journal Name: **International Journal of Plant & Soil Science**

Manuscript Number: **Ms_IJPSS_33047**

Title of the Manuscript: **Floristic compositions and its Affinities to Phytogeographical Regions in Wadi Khulab of Jazan, Saudi Arabia**

Type of the Article: **Original Research Article**

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

### Compulsory REVISION comments

Reviewer’s comment

1. In material and methods must indicate the floras used and the sampling technique.

2. It is convenient to do the bioclimatic study of the territory (see Rivas Martínez 2002, 2011 in Itinerar Geobotánica), to know what is the shoulder type and thermotype present in the study area.

3. It is advisable to make a biogeographic treatment of the area, since the author comments on the presence of species shared by several phytogeographic regions, it is not clear in which biogeographic unit the study is included.

4. In table 1 it is convenient to indicate a column with the percentage (abundance) of each species, and if there is any endemic species.

5. To improve the value of the article it is advisable to present tables of plant communities.

Author’s comment *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
