**Editor's Comment:**

It is difficult to disagree with opinion presented in the Report of Professor Kubilay Metin. The article “Effect of different fruit juice media on bacterial cellulose production by Acinetobacter sp. BAN1 and Acetobacter pasteurianus PW1” confusingly recalls the paper published in TURKJANS. Due to such similarities and a lack of broadening of the knowledge pertaining to the topic, I do not recommend this article to be published. To preserve standard of the Journal, it will be better to reject this manuscript.
