

SDI Review Form 1.6

Journal Name:	Journal of Advances in Biology & Biotechnology
Manuscript Number:	Ms_JABB_37101
Title of the Manuscript:	Total Phenols, Antioxidant Capacity and Antibacterial Activity of Manuka Honey Extract
Type of the Article	Short communication

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	<p>The study working about Manuka honey is good for this type of aim. But Manuka honey has so interesting characteristic in many aspects. Manuka honey is a source that attracts much attention from the therapeutic point of view. In particular the wound healing feature is of great importance. In a study B.G. Visavadia et al,2008 it is possible to see this feature clearly. Manuka honey has been reported to exhibit antimicrobial activity against pathogenic bacteria such as Staphylococcus aureus (S. aureus) and Helicobacter pylori(H. pylori) making this honey a promising functional food.</p> <p>Laboratory studies have revealed that the honey is effective against methicillin-resistant S. aureus(MRSA), β-haemolytic streptococci and vancomycinresistant Enterococci (VRE)(Allen et al,2000; Kingsley et al,2001).</p> <p>So of course this study be accepted as a preliminary study. But there are some handicaps also in this points.</p> <ol style="list-style-type: none"> 1.Total phenolic content was studied just an example Manuka honey (UMF10+). Why? 2. In line /101 Moniruzzaman et al [12] and Alvarez-Suarez et al [13] supported C phenols play.....What is the meaning of C. 3. In my opinion this study it could be better now. 4. Some literature may be added for example :Alzahrani et al., 2012 ; Can et al., 2015 	
Optional/General comments
