General guideline for Peer Review process:

This journal’s peer review policy states that NO manuscript should be rejected only on the basis of ‘lack of Novelty’, provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link: (http://www.sciencedomain.org/page.php?id=sdigeneral-editorial-policy#Peer-Review-Guideline)

<th>Reviewer's comment</th>
<th>Author's comment (If agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</th>
</tr>
</thead>
</table>
| Compulsory REVISION comments | The author aimed to perform a review of the literature focusing on the gene therapy in albinism. The topic is interesting, however, the manuscript is unacceptable for publication for several reasons:  
1. Figure 1 and 2 are taken from other paper, which is not allowed unless the author obtain a written permission to do it.  
2. The language require extensive correction to meet the requirement of the scientifically-sound paper.  
3. The text contains simple errors, that indicate that the author does not have basic understanding of the discussed topic. E.g.: The TYR gene has a crucial function for making tyrosinase – in fact, the gene is only encoding the sequence of tyrosinase, it is not making the enzyme – it must be first transcribed to mRNA sequence with the help of number of enzymes etc.  
4. The author does not distinguish between the nomenclature referring to genes and their products (proteins)  
5. On many occasions the text contains fragments which can be easily found in textbooks. |
| Minor REVISION comments |                                                                                                                                 |
| Optional/General comments |                                                                                                                                 |
