

Editor's Comment:

First of all I congratulate the authors for your effort to do a paper and put it under considerations .

Well, I have thought the case report very good and all requested questions about done by a peer-reviewer to the author were discussed and as possible as were attended.

I think that all the experience in frequent low cases should be disseminated as a form of aid to the medical community to serve as an alert in similar cases.

In addition to the present case report presented itself within quality standards of writing.

So I am of the opinion that the case should be published
