**SDI Review Form 1.6**

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments		
<b>Minor</b> REVISION comments	<p>It is an interesting study. It is clear. One can easily understand what their aim and what they did. We know the effects of light and sun but it is in an experimental design for the medical students. But we just know that the students are medical students. We don't know their intellectual capacity, IQ for example. If randomly selected intervention group students are more clever than the controls how can we claim that their performance effected by light. Authors should give some clues about balancing the beginning characteristics that may be effecting performance.</p>	
<b>Optional/General</b> comments		

**Reviewer Details:**
