SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Title Carotid Body Tumour a Challenging Management: Rare Case Report in Baghdad Radiation Oncology Center, Medical City, Baghdad, Iraq There mustn't be affiliation and address information in the title</p> <p>Follow up There is not any information regarding patient follow up after radiation therapy. Symptoms like hypertension, palpitation, flushing? Tumor size? Complications related to radiation. Did the patient get well after the treatment? Is he/she alive?</p> <p>Laboratory The author mentions about laboratory studies performed like: CBC, ESR, RFT, electrolytes, urine analysis. Results? Are they in normal limits? For example, the patient's complaint like palpitation, headache, and weight loss was attributed to catecholamine excess. Did the authors study catecholamine (vanilmandelic acid) levels in urine or serum?</p>	
Minor REVISION comments	<p>Discussion It would be better if the author compares radiation doses with their case and literature data</p> <p>Grammar There are some grammar and spelling errors.</p> <p>Abbreviations Abbreviations are given at the end of the paper. I don't know the journal's politics. But the abbreviations must be given in parenthesis where it is first mentioned in the manuscript. In addition an abbreviation "SOL" is not defined neither in the case report nor at the end of the paper.</p> <p>Figures Previous histopathology figure is not shown in the paper. However the author as he/she is defining the histopathology specimen as he/she is examining under light microscope.</p>
