

**SDI FINAL EVALUATION FORM 1.1**

**PART 1:**

Journal Name:	<a href="#">Journal of Cancer and Tumor International</a>
Manuscript Number:	Ms_JCTI_40034
Title of the Manuscript:	Carotid Body Tumour a Challenging Management: Rare Case Report in Baghdad Radiation Oncology Center, Medical City, Baghdad, Iraq
Type of Article:	Case Report

**PART 2:**

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>This case report has improved however there are still many corrections to be made.</p> <p><b>Abstract:</b>                      Case presentation; the statement 'she was complaining of hypertension should be she complained of , low grade fever is not a complaint rather 'fever'                      She was observed to have gradual onset of growing and pulsating lump                      At October 2012 should be changed to 5 years later the lesion became larger and she started feeling pulsation on lying .....</p> <p><b>Workup; 'slide' not slid</b>                      Conclusion over 40 years of working in this field we have only seen about 3 cases of cbts                      Management of this tumor is challenging whether it is treated by surgery or by radiotherapy.                      The main step in its management is by excluding other tumors that can be found in this region</p> <p><b>Introduction</b>                      Line 25; should be three types of types of cbts have been described                      Line 34-its management must involve thorough evaluation                      Line 39- duplex or Doppler</p> <p><b>Case presentation</b>                      Line 45- You don't need to write date                      Line 48- she consulted many doctors and clinics                      Line 51- 2 weeks prior to her presentation to Baghdad radiation oncology center                      Line 52- the mass rapidly increased in size</p> <p><b>Physical examination</b>                      Line 57-change&amp; to and, and mobility which is transversely than vertically                      Line 58- she complain of</p> <p><b>CT scan of neck</b>                      Line 73- no infiltration into adjacent structure seen (delete it)</p> <p><b>Carotid angiography of neck</b>                      Line 81- comparism not compares                      Line 83- upper neck                      Line 88- histopathology done in 2012 showed</p> <p><b>Treatment</b>                      Line 96- in size                      Line 98- as this was a recurrent case</p> <p><b>Discussion</b>                      Line 120- which allows for discrimination between....                      Line 140- patient should be adequately followed up</p>
