Editor's Comment:

Considering the objectives and policies presented, and in respect to all reviewers’ comments, it is clear that authors have made substantial efforts in order to improve and better fit all expectations. I do agree with all points raised and discussed, in my opinion authors have solved all major queries.

I would suggest authors to use italic when writing "et al." in line 130. Another refinement could be the best position for each table, all over the text but, in my opinion, it does not compromise the paper.

In overall I recommend the text for publication in its final state.
