**SDI Review Form 1.6**

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Compulsory</b> REVISION comments	<p>The author does not really prove his case.</p> <p>The paper aims to demonstrate that there exists an "Intentional Efforts to Cause Global Warming and Glacier Melting" by specific particulate aerosol spraying in the troposphere by coal fly ash. However, the author at most demonstrates that just in a single case (on February 14, 2016) and above a very limited area (in Harrison Township, Michigan) that could have occurred.</p> <p>I think that the evidences proposed in the paper are too slim to deduce a world-wide case. It is true that the author refers also to "unofficial worldwide observations". However, The fact that these were "unofficial" makes the case very weak.</p> <p>I would suggest the author to search further convincing evidences to support his hypothesis. Otherwise, he can simply rewrite the paper putting the emphasis on the event occurred in Harrison Township on 02/14/2016, which may be interesting without inferring the necessity of inferring a worldwide plot.</p>	
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments
