Editor’s comments:

I have gone through the manuscript entitled “Chemical constituents and nutrient composition of Carica papaya and Vernonia amygdalina leaf extracts”. The manuscript till contains syntax errors as well required moderate modifications like:

1. Voucher specimen number for both plants as well name of taxonomist was missing.
2. I did not found any correlation between its medicinal importance and chemical constituents in the manuscript.
3. Discussion unable to express novelty of the work.
4. Reference till not uniform. Kindly follow the author instruction and give attention for uniformity.

Authors’ feedback:

We reported the presence of the important components of C. papaya and V. amygdalina resolved by GC-MS analysis and their nutrients compositions which is the first time such work has been done. Thus, the first step towards understanding of the active chemical components in the medicinal plants, which is helpful for in the in-vivo work which is being carried out to establish the activity of the crude and purify component(s) as antimalarial, antioxidant, anticancer and antitrypanosomiasis agent.

The taxonomist name and the voucher number have been included. The references has been thoroughly checked and we hope is now in uniformity.
